

Faculty of Medicine

ORL2130

Phoniatics

[30h]

Teacher(s): Marc Remacle
Language: French
Level: Second cycle

Aims

Teaching of voice and swallowing disorders, their assessment as well as their medical and surgical treatment. Present methods for assessment including flexible and rigid indirect laryngoscopy, suspension laryngoscopy, imaging, and objective voice assessment are presented. Pathology is extended from dysfunctional dysphonia to voice and swallowing problems related to Head & Neck cancer. Disorders related to the child and the aged patient are included.

Main themes

Flexible and rigid indirect laryngoscopy, suspension laryngoscopy, fibroscopy assessment of swallowing, videofluoroscopy, objective voice assessment including perceptual and self-perception scales, aerodynamic and acoustical measurements, dysfunctional dysphonia, exudative lesions of the Reinke's space (nodules, polyp, Reinke's edema), retentional and epidermoid cysts, sulcus and related lesions, scars and larynx trauma, granuloma, paralysis and mobility disorders, hypertrophic chronic laryngitis, larynx cancer, papillomatosis, presbyphonia, oral cavity and velum lesions, superior esophageal sphincter dysfunction, Zenker's diverticulum, ORL lesions related to gastroesophageal reflux

Content and teaching methods

Voice and swallowing disorders, their assessment, medical and surgical treatment

Other information (prerequisite, evaluation (assessment methods), course materials recommended readings, ...)

This course is part of the interuniversity master's degree in speech therapy UCL-ULB. The course is presented in visioconference between Louvain-La-Neuve and the Solbosch (ULB). It is based on powerpoint presentations and videoclips; an Icampus version is edited on the UCL Intranet.

Exam is written with open questions. The course is held during the second period of the year and exams take place in June and September

Other credits in programs

LOGO22	Deuxième licence en logopédie (programme commun UCL/ULB)	(4 credits)	Mandatory
