

Faculty of Psychology and Education Sciences

PSY2650 Advanced questions of neurolinguistics

[30h] 3 credits

This course is taught in the 1st semester

Teacher(s): Marie-Pierre de Partz de Courtray, Agnesa Pillon
Language: French
Level: Second cycle

Aims

- to familiarize the students with the neurolinguistic research by presenting them in detail the late works in the field.

Main themes

The course will be organised around some of the major questions in late neurolinguistics: phonological, lexical, semantic or syntactic difficulties following a brain damage.

- to introduce to the research methods in neurolinguistics
 - to show how these research complementarily contribute with the psycholinguistic research on normal subjects to the elucidation of the mental processes underlying the language behaviours. In this integrative approach, the originality and the specificity of the neuropsychology contributions will be explicitly underlined.

The contents of the course will be adjusted each year according to the themes tackled and to the advance of the research.

The clinical implications of the research presented can be tackled, but the main orientation of the course remains the research.

Content and teaching methods

- to familiarize the students with the neurolinguistic research by presenting them in detail the late works in the field.

Other information (prerequisite, evaluation (assessment methods), course materials recommended readings, ...)

Lectures with active participation of the students through a reading portfolio.

Programmes in which this activity is taught

LING2MA Master en linguistique, à finalité approfondie en linguistique générale et appliquée

Other credits in programs

LING2MA Master en linguistique, à finalité approfondie en linguistique générale et appliquée (4 credits)

PSY23/6 Troisième licence en sciences psychologiques (3 credits) Mandatory
 (Neuropsychologie clinique)
