

Faculty of Medicine

PSYC2152 Child psychiatry : psychiatric and psychosomatic syndromes

[15h] 2 credits

Teacher(s): Dominique Charlier
Language: French
Level: Second cycle

Aims

The aim is to sensitize the non psychiatrist's doctors (mainly general practitioners and pediatricians) with the great psychiatric and psychosomatic syndromes in the childhood.

Main themes

The principal topics in review are: development disorders; autism; psychoses; neuroses in the childhood; the OCD; the school phobia; psychosomatic syndromes;

In the various topics, we will be particularly attentive with:

- To give good tools for clinical location;
- To show what the first line consists, this work which remains essential, even with serious pathologies (for example: information and support of the parents; management of the child's symptoms);
- To outline the components of the specialized treatment.

Content and teaching methods

The aim of the course is to review the great syndromes of infantile psychopathology. We sensitise the student with the location, the étiopathogénie, and especially with the treatment's components which it can implement in first lines (general practitioner or pediatricians).

Other information (prerequisite, evaluation (assessment methods), course materials recommended readings, ...)

Evaluation: oral examination: to discuss a case study.

Support: cases discussions, videos.

To consult the syllabus "Introduction to the psychopathology and the child's psychiatry" (Prof JY Hayez) who gives synthetic informations.
