

Faculty of Economic, Social and Political Sciences

DEMO3432 Multivariate analysis I applied to demography and social sciences

[15h+15h exercises] 2.5 credits

Teacher(s): Josianne Duchene
Language: French
Level: Third cycle

Aims

To introduce students to the use and interpretation of the results of a multivariate statistical analysis in demography and social sciences.

Main themes

Statistical tests and measuring association between variables.
 Ways of analysing interdependences, particularly factorial analysis and analysis in main components.
 Analyses of dependence, particularly the analysis of regression.
 Analysis of hierarchical classification.

Content and teaching methods

A theoretical course illustrated by examples and the interpretation of results.

Other information (prerequisite, evaluation (assessment methods), course materials recommended readings, ...)

Pre-requirements: Course SPED 3245 (Elementary statistics applied to demography and social sciences), DEMO 3415 (Elementary mathematics applied to demography and social sciences) and DEMO 3419 (Introduction to micro-informatics, information technology and data processing).

Assessment: This will be based on work done on DEMO 3480 practice sessions. There will also be an oral examination based on work handed in during the year.

Other credits in programs

DEMO3DA	Diplôme d'études approfondies en démographie	(2.5 credits)	Mandatory
DEMO3DS	Diplôme d'études spécialisées en populations et sociétés	(2.5 credits)	Mandatory
