

## Faculty of Applied Sciences

### FSAB1209 Advanced Statics

[15h+10h exercises] 2 credits

This course is taught in the 1st semester

**Teacher(s):** David Johnson (coord.), Jean-Claude Samin  
**Language:** French  
**Level:** First cycle

#### Aims

At the outcome of this course, students are expected to :

- know about the various types of external and internal joints and supports, as well as the related degrees of freedom
- understand the meaning of total and partial isostaticity and hyperstaticity
- be able to apply virtual work principles in solving problems of statics
- be able to determine internal loads and stresses and strains in a beam, as well as the resulting sizing of the beam

#### Main themes

Equilibrium of systems of rigid bodies

Internal loads

Stresses and strains

Principle of virtual work, as applied to static systems.

Application of the above to the specific case of loaded beams and trusses

#### Content and teaching methods

- Graphical methods in statics
- Trusses
- Internal loads in loaded rigid bodies
- Traction and compression : stresses and strains
- Bending : stresses and strains
- Torsion : stresses and strains
- Loaded beams : strength and deformation sizing
- Principle of virtual work applied to static systems.

#### Other information (prerequisite, evaluation (assessment methods), course materials recommended readings, ...)

Prerequisites :

FSAB 1201 (Physics 1) or an equivalent course

FSAB 1202 (Physics 2) or an equivalent course

FSAB 1203-A (Physics 3) or an equivalent course

FSAB 1101 (Mathematics 1) or an equivalent course

FSAB 1102 (Mathématiques 2) or an equivalent course

Assessment :

Written examination, centred on problem solving.
