PEDI2360 Pediatric clinical practice

[7h]

Teacher(s): Bénédicte Brichard, Dominique Hermans, Thierry Sluysmans, Etienne Sokal (coord.), Christiane Vermynen
Language: French
Level: Second cycle

Aims

This course aims to organise and guide the students during their pediatric training stage. It will be concentrated on self learning procedures, literature review, good use of internet for medical practice, critical review of clinical cases, peer review process, making decision process, hospital discharge decision and follow up

Main themes

The course is organised in the form of weekly seminars. The seminars are animated by the students, under the supervision and guidance of the professor. The students learn to present and be positively criticized, in the presentation, the differential diagnosis, the decision process. They learn how to gather all the informations from a practical clinical case to train their own self learning capacities and peer review activity. Subjects include clinical symptoms, history taking procedure, para clinical investigations, treatment, follow up, searching information in the literature and on the web will be encouraged and critically reviewed and discussed.

Content and teaching methods
