

K6514

Short description : The Model **6514 Electrometer** combines flexible interfacing capabilities with current sensitivity, charge measurement capabilities, resolution, and speed that are equal or superior to our earlier electrometers. The Model 6514's built-in IEEE-488, RS-232, and digital I/O interfaces make it simple to configure fully automated, high speed systems for low-level testing.

- * <1fA noise
- * >200T Ω input impedance on voltage measurements
- * Charge measurements from 10fC to 20 μ C
