

Workshop SOLDERING INFRARED OVEN Model:T962A rr on T962A

Short description : T962A Description:

The INFRARED IC HEATER T962A is a micro processor controlled reflow-oven. It can be used for effectively soldering various SMD and BGA components. The whole soldering process can be completed automatically and it is very easy to use. This machine uses a powerful infrared emission and circulation of the hot air flow, so the temperature is being kept very accurate and evenly distributed.

A windowed drawer is designed to hold the work-piece, and allows safe soldering techniques and the manipulation of SMD/BAG and other small electronic parts mounted on a PCB assembly. The T962A may be used to automatically rework solder to correct bad solder joints, remove/replace bad components and complete small engineering models or prototypes.

Localisation : Electronic Workshop
