

Ultrasonic Cleaner

Short description :

The Aoyue 9050 is an ultrasonic cleaner with many different applications. Many different objects can be cleaned easily and carefully with this product. Applications include for example the removal of flux from a chip, but also the cleaning of jewellery and other objects. The cleaning basin can hold 500 ml and is 88 mm wide, making it sufficiently spacious to clean most objects.

The basin operates on a frequency of 40 kHz, which is undetectable to people. With the built-in timer, the basin will stop cleaning after 99 seconds. Should the cleaning be finished sooner, then the 9050 cleaner can be switched off by pushing the on/off button. With the Hi/Lo button, you can choose to clean with a power of 30 or 50 Watt.
