

Prober Polytec

Short description : **MSA-500 Micro System Analyzer** is a powerful new all-in-one measurement workstation for precise 3-D dynamic characterization of MEMS and MOEMS microstructures.

- * Characterize out-of-plane vibrations by Scanning Laser-Doppler Vibrometry ;
- * Measure in-plane motion and vibration by Stroboscopic Video Microscopy ;
- * Determine surface topography by White Light Interferometry ;
- * Test wafers and individual die by combining Polytec's MSA-500 with a MEMS probe station .
